nabc language for gregorio

The nabc language provides the ability to describe some adiastematic neumes, for now just the St. Gallen and Laon (Metz notation family) style. The language is partially based on Dom Eugène Cardine's Table of neumatic signs, but for more complex neumes doesn't always match how the neumes are called; instead attempts to make it easier to compose complex neumes from basic glyphs. To describe adiastematic neumes in gabc, the header should contain `nabc-lines: 1;` line, like:

```
nabc-lines: 1;
(f3) AL(ef~|ta>)le(fg/hggf|peclhgpi)lú(ef~|ta>)ia.(f.|ta-) (,)
(ii//|bv-|gh!ivHG//|vi-hhppu2su1sut1|fhg/|to|eef.|pt) (;)
```

The nabc snippets are then separated by `|` character from gabc snippets or other nabc snippets. Every gabc snippet may be followed by multiple nabc snippets. The maximum number of consecutive nabc snippets is the number declared in the header field `nabc-lines: x;`. After reaching that number of consecutive nabc snippets another gabc snippet followed by nabc snippets can follow. A single nabc snippet is not split into multiple lines, so for larger melismatic pieces it is desirable to synchronize the gabc snippets with corresponding nabc snippets. With `nabc-lines: 1;` the gabc and nabc snippets form an alternating pattern, like `(gabc|nabc|gabc|nabc|gabc)`, in this case the last gabc snippet does not have any corresponding nabc neumes. With `nabc-lines: 2;` the snippets ordering could be e.g. `(gabc|nabc1|nabc2|gabc|nabc1)`.
Each nabc snippet consists of a sequence of *complex neume descriptors*. Each *complex neume descriptor* consists of optional *horizontal spacing adjustment descriptor*, then *complex glyph descriptor*, optionally followed by a sequence of *subpunctis and prepunctis descriptor*s, optionally followed by a sequence of *significant letter descriptor*s.
The *horizontal spacing adjustment descriptor* consists of a sequence of horizontal spacing adjustment characters `/` and `` ` ``.

- `//` move by `nabclargerspace` skip to the right
- `/` move by `nabcinterelementspace` skip to the right
- `` `` `` move by `nabclargerspace` skip to the left
- `` ` `` move by `nabcinterelementspace` skip to the left

The *complex glyph descriptor* consists of a *glyph descriptor*, optionally followed by a sequence of other *glyph descriptor*s, all separated by the `!` character. This is used to describe more complex glyphs, where certain basic glyphs are connected together.
Each *glyph descriptor* consists of a *basic glyph descriptor*, followed by optional *glyph modifiers*, followed by optional *pitch descriptor*.
The following description is for the St. Gall family of neumes, when using the gregall or gresgmodern fonts. For details on Laon (Metz notation family) neumes see 4.
The *basic glyph descriptor* is a two-letter string from the following table:

`vi` virga	`po` porrectus	`tr` torculus resupinus	`tv` trivirga	`pq` pes quassus
`pu` punctum	`to` torculus	`st` stropha	`pr` pressus maior	`ql` quilisma (3 loops)
`ta` tractulus	`ci` climacus	`ds` distropha	`pi` pressus minor	`qi` quilisma (2 loops)
`gr` gravis	`sc` scandicus	`ts` tristropha	`vs` virga strata	`pt` pes stratus
`cl` clivis	`pf` porrectus flexus	`tg` trigonus	`or` oriscus	
`pe` pes	`sf` scandicus flexus	`bv` bivirga	`sa` scandicus	

The `glyph modifiers` is a possibly empty sequence of following characters optionally followed by a number:

- `S` modification of the mark
- `G` modification of the grouping (neumatic break)
- `M` melodic modification
- `-` addition of episema
- `>` augmentive liquescence
- `~` diminutive liquescence

If Dom Cardine's table contains multiple glyphs with the same modifiers, a positive number is added afterwards. E.g. for augmentive liquescent clivis the table shows two different glyphs, the ancus `cl>` and then another neume - `cl>1`, the first neume does not contain any number after it, while the `1` indicates first variant.
The *pitch descriptor* allows to specify the vertical position of the neume. There are no staves, so the vertical position is only rough. For pitches the same letters as in gabc are used, `a` through `n` and `p`. If the *pitch descriptor* is missing, the default is `hf`, otherwise it consists of the letter `h` followed by the pitch letter. Within the *complex glyph descriptor*, each *basic glyph descriptor* has its own pitch, but in the current fonts there are no glyphs with different relative pitches, so if you use a *pitch descriptor* on any of the *basic glyph descriptor*s in the *complex glyph descriptor*, it is best to use the same one on all the other *basic glyph descriptor*s in the same *complex glyph descriptor*.
The *subpunctis and prepunctis descriptor* consists of the letters `su` for subpunctis or `pp` for prepunctis, followed optionally by a modifier letter from the following table and finally a mandatory positive number of repetitions. If the modifier letter is missing, it is a punctum.

- `t` tractulus

- `u` tractulus with episema
- `v` tractulus with double episema
- `w` gravis
- `x` liquescens stropha
- `y` gravis with episema

Only subpunctis are normally used in neume classification, the prepunctis is a `nabc` concept to describe the rising sequence of punctis, tractulis etc. in the left low corner of some neume. While e.g. `vipp2` describes the same neume as `sc`, the former form allows better control on how many punctis or tractulis or tractulis with episema etc. there are. Some examples: `ppt3` stands for 3 raising tractulis with episema, while `su1sut1sux1` stands for a punctum, followed by tractulus, followed by liquescens stropha.
The *significant letter descriptor* consists of the letters `ls`, followed by a shorthand of the significant letter or common group of them, followed by a number - a rough position relative to the *complex glyph descriptor* glyph with prepunctis and subpunctis attached to it. If more than one *significant letter descriptor* is used on the same *complex neume descriptors* for the same position, then they are ordered in the order they are written in the `nabc` snippet at that position. The position numbers are:

`1` left upper corner	`2` above the neume	`3` right upper corner
`4` to the left of the neume		`6` to the right of the neume
`7` left bottom corner	`8` below the neume	`9` right bottom corner

The shorthands, including the `ls` prefix, which should be followed by the above mentioned position digit:

`lsal` altius	`lsiv` iusum valde	`lss` sursum
`lsam` altius mediocriter	`lsk` klenche	`lssb` sursum bene
`lsb` bene	`lsl` levare	`lssc` sursum celeriter
`lsc` celeriter	`lslb` levare bene	`lssimil` similiter
`lscm` celeriter mediocriter	`lslc` levare celeriter	`lssimul` simul
`lsco` coniunguntur	`lslen` leniter	`lssm` sursum mediocriter
`lscw` celeriter (wide form)	`lslm` levare mediocriter	`lsst` sursum tenere
`lsd` deprimatur	`lslp` levare parvum	`lssta` statim
`lse` equaliter	`lslt` levare tenere	`lst` tenere
`lseq` equaliter	`lsm` mediocriter	`lstb` tenere bene
`lsew` equaliter (wide form)	`lsmoll` molliter	`lstm` tenere mediocriter
`lsfid` fideliter	`lsp` parvum	`lstw` tenere (wide form)
`lsfr` frendor	`lspar` paratim	`lsv` valde
`lsg` gutture	`lspfec` perfecte	`lsvol` volubiliter
`lsi` iusum	`lspm` parvum mediocriter	`lsx` expectare
`lsim` iusum mediocriter	`lspulcre` pulcre	

Finally a commented example of a `nabc` snippet:

```
```po////pe>2lse7lsl3qlhh!vshhppt1sut2ql>ppu3
```

``` stands for a negative horizontal skip (move to the left) by `nabcinterelementspace` and `nabclargerspace`.
`po` is a basic porrectus, at the default pitch (height `hf`).
`////` stands for a horizontal skip (move to the right) by two times `nabclargerspace`.
`pe>2lse7lsl3` stands for the 3rd augmentive liquescent form of podatus (epiphonus with tractulus, see the following page) at the default pitch, with equaliter in the low left corner and levare in the upper right corner.
`qlhh!vshhppt1sut2` stands for a 3 loop quilisma joined with virga strata, both at relative pitch 2 above the default one, with a single tractulus before it and two subpunctis - tractulis.
`ql>ppu3` is a 3 loop liquescent quilisma with 3 tractulis with episema before it.

The *basic glyph descriptor* for Laon neumes is very similar to the one used for St. Gall neumes, but with uncinus and oriscus-clivis added and stropha, 2 loops quilisma and gravis removed:

`un` uncinus
`vi` virga
`pu` punctum
`ta` tractulus
`gr` gravis
`cl` clivis
`oc` oriscus-clivis

`pe` pes
`po` porrectus
`to` torculus
`ci` climacus
`sc` scandicus
`pf` porrectus flexus
`sf` scandicus flexus

`tr` torculus resupinus
`ds` distropha
`ts` tristropha
`tg` trigonus
`bv` bivirga
`tv` trivirga
`pr` pressus maior

`pi` pressus minor
`vs` virga strata
`or` oriscus
`sa` scandicus
`pq` pes quassus
`ql` quilisma
`pt` pes stratus

The *subpunctis and prepunctis descriptor* consists of the letters `su` for subpunctis or `pp` for prepunctis, followed optionally by a modifier letter from the following table and finally a mandatory positive number of repetitions. If the modifier letter is missing, it is a punctum.

- `n` uncinus
- `q` quilisma
- `z` virga
- `x` cephalicus

The *significant letter descriptor* for Laon neumes allows another position, `5`, which stands for inside the neume. The exact position of the letter depends on the glyph, if there is no glyph with the neume inside of it, it can't be positioned inside the neume.
The shorthands, including the `ls` prefix, which should be followed by the above mentioned position digit for Laon neumes are:

`lsa` augete
`lsc` celeriter
`lseq` equaliter
`lseq-` equaliter
`lsequ` equaliter
`lsf` fastigium
`lsh` humiliter
`lshn` humiliter nectum
`lshp` humiliter parum
`lsl` levare
`lsn` non (tenere), negare, nectum, naturaliter

`lsnl` non levare
`lsnt` non tenere
`lsm` mediocriter
`lsmd` mediocriter
`lss` sursum
`lssimp` simpliciter
`lssimpl` simpliciter
`lssp` sursum parum
`lsst` sursum tenere
`lst` tenere
`lsth` tenere humiliter

For the Tironian notes the form of the *significant letter descriptor* starts with the `lt` prefix followed by letters from the following list, followed by above mentioned position digit (`5` can't be used):

`lti` iusum
`ltdo` deorsum
`ltdr` devertit
`ltdx` devexum
`ltps` prode sub eam (trade subtus)
`ltqm` quam mox
`ltsb` sub
`ltse` seorsum

`ltsj` subjice
`ltsl` saltim
`ltsn` sonare
`ltsp` supra
`ltsr` sursum
`ltst` saltate (salte)
`ltus` ut supra

manuscript sources of the gregall font

The list of glyphs uses following abbreviations for manuscript references; the page number is always for the start of some antiphon, responsory, mass propers, even when the actual neume is on a later page. At the end of lines, GT stands for Graduale Triplex, Solesmes, 1979, OT for Offertoriale Triplex, Solesmes, 1985, AM for Antiphonale Monasticum, Solesmes, 1934, ARII for Antiphonale Romanum II, Solesmes, 2009 and NR for Nocturnale Romanum, Hartker Verlag, 2002, followed by page number which also contains the corresponding propers, antiphons or responsories.

Most of the glyphs taken from the e-codices Virtual Manuscript Library of Switzerland, http://www.e-codices.unifr.ch/en, with permission from Stiftsbibliothek, St. Gallen http://www.stibi.ch/ and Stiftsbibliothek, Einsiedeln http://kloster-einsiedeln.ch/, the picture fragments from there are only present in the font source file to help drawing the glyphs.

manuscript sources of the grelaon font

The list of glyphs uses following abbreviations for manuscript references; the page number is always for the start of some antiphon, responsory, mass propers, even when the actual neume is on a later page. At the end of lines, GT stands for Graduale Triplex, Solesmes, 1979, OT for Offertoriale Triplex, Solesmes, 1985, GN for Graduale Novum de Dominicis et Festis, Conbrio Verlag Regensburg, 2011, followed by page number which also contains the corresponding propers, antiphons or responsories.

All the grelaon font glyphs taken from the LAON_BM_ms239 codex with the permission from the Bibliothèque municipale de la ville de Laon http://manuscrit.ville-laon.fr, the picture fragments from there are only present in the font source file to help drawing the glyphs.

Graduale Laudunensis, codex 239

L1 = http://manuscrit.ville-laon.fr/_app/_visualisation.php?cote=Ms239&vue=9
